

Carevium Assisted Living Software

Focus on Resident Care, Not on paperwork

Most aspects of Assisted Living resident care management can be simplified with the use of the Carevium Senior Living software application. In addition, the Carevium Access Anytime app can be utilized by family members to keep track of the daily activities of their senior loved ones at the ALF. Corporate management can also get centralized, consolidated views of every aspect of management with live reports.

The software implementation is quick and easy with no upfront investment. Additionally, it is very user-friendly and has a minimal learning curve. The Carevium team helps implement the cloud based system for our ALF clients to get them started on the service quickly. Using modern technologies, such as online seminars/webinars, video walk-throughs, and remote access to screens, we will be there to guide your staff.

I love using Carevium for all my daily resident care activities!

Benefits

- Increase Efficiency
