

Carevium Home Care Agency Software

Focus on Client Care, Not on paperwork

Most aspects of Home Care businesses providing at-home care for clients / patients are simplified with the use of cloud based Carevium Home Care software application. In addition, the Carevium Access Anytime app can be utilized by family members to keep track of the daily care activities of their loved ones living independently. Corporate management can also get centralized, consolidated views of every aspect of operation with live reports. Carevium supports single office, multi-office, and franchise system owners.

The software implementation is quick and easy with no upfront investment. Carevium is very user-friendly and has a minimal learning curve. The Carevium team helps implement the cloud based system for our Home Care clients to get them started on the service quickly. Using modern technologies, such as online seminars/webinars, video walk-throughs, and remote access to screens, we will be there to guide your staff.

Benefits
